IEEE Transactions on instrumentation and measurement, vol. IM-28, NO. 4, DECEMBER 1979 Microprocessor in Biomedical Instrumentation PIERRE M. FORGUES AND MORRIS GOLDBERG Their expanding role in laboratory and hospital instrumentation is described with a few application examples. A few microprocessor-based instrument architectures for data acquisition are discussed. The advantages and tradeoffs involved in their use in biomedical instrumentation are discussed.

INTRODUCTION

ALTHOUGH microprocessors have been available for a number of years, it is only recently that they are being incorporated into biomedical instruments in the hospital and the laboratory.

Intelligent Instrumentation book. Read reviews from world's largest community for readers. Intelligent Instrument by George C. Barney. I. Introduction

There are various applications of microprocessor which makes our life easy and simple. Various instruments which we are using...

Microprocessor-based gamma-ray spectral logging with scintillation detector to trace the analog profiles of total, K, U and Th channels with corresponding depth. This system is being tested in the field in different areas for its performance.

VI. From toothbrush to missiles everything is operated with microprocessor control. It is supposed that in near future the cars will be fully automated and can be operated under microcontroller applications. Cars will be parked itself, will be driven automatically, itself control its speed according to traffic and many more. Microprocessor are increasingly playing a major role in modern society.

Flow Measurement and Instrumentation is dedicated to disseminating the latest research results on all aspects of flow measurement, in both closed conduits and open channels. The design of flow measurement systems involves a wide variety of multidisciplinary activities including modelling the flow sensor, the fluid flow and the sensor/fluid interactions through the use of computation techniques; the development of advanced transducer systems and their associated signal processing and the laboratory and field assessment of the overall system under ideal and disturbed conditions. Instrumentation, Control and Automation Technology Instrumentation, Control and Automation are terms from the Automation field. The aim of this field is to monitor and operate technical events and production processes by means of automatic-running control systems. Instrumentation, Control and Automation is an interdisciplinary field very prevalent in modern industrial society. Therefore, industry and transport management requires knowledge of energy, mass and traffic flows in production and logistics. The world is becoming more densely populated and requires intelligent processes for controlling and distributing its resources. Sensors are indispensable, as they deliver the data required for controlling processes. Intelligent Instrumentation book. Read reviews from world's largest community for readers.
