Few books on the subject of Critical Care Medicine are as interestingly written as this one. The book deals with practical microbiological problems that concern the Intensive Care Units; the entire narration is lucid with easy to comprehend tables, flow diagrams, labelled diagrams and photographs.

Therapy for infectious complications is fast changing. The book discusses new antimicrobials and immunomodulators, some of which are more efficient and cost effective. Knowing that intensivists fear antimicrobial resistance like the plague, the authors provide a critical insight and guidelines regarding monitoring of antibiotic resistance and how best to deal with a difficult situation. The book also deals with practical issues such as : how often should the intravascular catheters, ventilator tubings or urinary

Pathology of Liver by RNM MacSween, AD Burt (Editors); 4th Edition, Published by Churchill Livingstone, London, Edinburgh; 2002; Pages 982; Illustrations 721; hard bound; price Rs 13887; ISBN No 0-4430-6181-5.

In this book, the concept of hepatic lobule is again brought with a modification of classic lobule for descriptive histopathology. The patho-physiological aspects concerning the hepatic lobule and acinar structure are illustrated diagrammatically in such a way that the concept of damage to the liver cells by various agents becomes clear for the students of histopathology. Major advances in the molecular understanding of inherited and metabolic diseases and hepatic hormonogenesis are dealt with. Plenty of illustrations with CT scan and their correlation with E/M, HPE and immuno-histochemical staining makes the understanding better in the above disorders. The changing concepts in acute and chronic hepatitis reflecting advances in virology and immunology are covered. Light has been

drainage tubes be changed? When does one use prophylactic antimicrobials? How does one manage an outbreak of infection in the ICU? How best does one achieve quality assurance in an ICU? How should a percutaneous / mucosal exposure to potential pathogens be managed? How best can we use laboratory tests in the ICU? How are samples to be sent? The contributing authors are all experienced clinicians who discuss all details in a practical manner. A separate section is devoted to therapeutic considerations.

The foreword is written by Dr Henry Masur, MD, Chief Critical Care Medicine Clinical Center, National Institute of Health, Bethesda, Maryland, USA.

The book will serve as an ideal companion for the intensivist in the ICU and may be kept in the critical areas for quick referral should a situation demand so.

thrown on lately discovered viruses including hepatitis G and TT viruses and they are kept in the proper perspective. The hepatotoxicity due to drugs are extensively covered with plenty of illustrations. The chapter on transplantation pathology is considerably extended with increasing emphasis on treatment modality. The concept of hepatic stem cell compartment at the interface between the biliary epithelium and the hepatocyte is addressed for future therapies. The book is a masterpiece in liver pathology and recommended as reference book for Medical Library in hospitals and Medical Colleges.

resuscitation, life support and monitoring, has never been greater. It is in this environment that the third and latest edition of Infectious Diseases in Critical Care Medicine has been released. The book is highly readable, clinically

oriented and very relevant to the bedside practice of critical care. At 581 pages long, it contains 31 chapters organized into four sections written by nationally and internationally recognized teacher/clinicians. You can write a book review and share your experiences. Other readers will always be interested in your opinion of the books you've read. Whether you've loved the book or not, if you give your honest and detailed thoughts then people will find new books that are right for them. Preface. The second edition of Infectious Diseases in Critical Care Medicine has been streamlined while maintaining its clinical focus. Again, the authors have been selected for their expertise and experience. The contributors are world-class teachers/clinicians who have, in their writings, imparted their clinical experience for the benefit of the critical care unit physicians and their patients. The second edition of Infectious Diseases in Critical Care Medicine remains the only book dealing with infections in critical care.
