

The Problems of Mathematics

IAN STEWART

Second Edition

Oxford New York
OXFORD UNIVERSITY PRESS

1992

Contents

List of Figures	ix
Interview with a mathematician	1
Interview to the second edition	4
1 The nature of mathematics	9
2 The price of primality	21
3 Marginal interest	33
4 The neglected book of Euclid	47
5 Parallel thinking	59
6 Sphereful symmetry	69
7 The miraculous jar	87
8 Ghosts of departed quantities	97
9 The duellist and the monster	115
10 Much ado about knotting	130
11 The purple wallflower	146
12 Squarerooting the unsquarerootable	155
13 Squaring the unsquarable	168
14 Strumpet Fortune	179
15 The mathematics of nature	189
16 Oh! Catastrophe!	208
17 The patterns of chaos	222
18 The two-and-a-halfth dimension	239
19 The lonely wave	254
20 More ado about knotting	267
21 <i>Dixit Algorizmi</i>	291
22 The limits of computability	300
23 The ultimate in technology transfer	312
Further Reading	322
Index	337

Some problems may belong to more than one discipline of mathematics and be studied using techniques from different areas. Prizes are often awarded for the solution to a long-standing problem, and lists of unsolved problems receive considerable attention. For faster navigation, this Iframe is preloading the Wikiwand page for List of unsolved problems in mathematics. Home. News.
